(PATENT)

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Patent Application of:
David A. BIRO, et al.

Application No.: 10/591,336
Filed: August 31, 2006

Patent No. 7,886,665

Issued: February 15, 2011

Customer No.: 13772

Confirmation No.: 9426

Art Unit: 1795

For: METHOD OF MANUFACTURING OF LOW-
ODOR PACKAGING MATERIALS

Examiner: Chanceity N. ROBINSON

MS: Certificate of Correction Branch

REQUEST FOR CERTIFICATE OF CORRECTION PURSUANT TO 37 C.F.R. § 1.322

Dear Sirs:

Patentee has compared the above-referenced, issued patent with the application as filed and amended. A mistake, incurred through the fault of the Office, was discovered on the face of the issued patent. Specifically, the issued patent fails to reference U.S. Provisional application No. 60/558,076 to which the PCT Application claims priority. As evidence, a copy of the face of the PCT Publication referencing the Provisional application is enclosed herewith. For at least these reasons, Patentee respectfully requests the following be included on the face of the patent under Related U.S. Application Data:

Provisional application No. 60/558,076, filed on March 31, 2004.

Transmitted herewith is a Certificate of Correction effecting such amendments. Patentees respectfully solicit the granting of the requested Certificate of Correction.

Patentees submit no fees are due in connection with this Request since the errors were made by the United States Patent and Trademark Office. However, if a fee is deemed necessary for this request, authorization is hereby given to charge or credit any fees in connection with the matter to Deposit Account No. 50-0911.

Dated: March 27, 2012

Respectfully submitted,

By: /Tayan B. Patel/

WO 2005/097495 A1

(54) Title: METHOD OF MANUFACTURING LOW-ODOR PACKAGING MATERIALS

(57) Abstract: The present invention provides a method for producing a low-odor, printed packaging material and the printed packaging material produced thereby. The printed packaging material of the present invention is especially suitable for packaging of substances, such as food, drugs and tobacco, which require low odor from printing inks. In this process, the printed ink is activated by exposure to actinic radiation, such as UV light, before an actinic-radiation curable coating is applied thereto. The exposure of the printed ink to UV light reduces residual solvent content and odor of the packaging material and improves the friction resistance and gloss of the printed images. Furthermore, the exposure of the printed packaging material to UV light provides an additional benefit of reducing microbial count, thereby extending a shelf-life of the packaged substance, such as food and drugs.
